

## **The Delivery Mystery**

Lena runs a small bookstore in Brooklyn. Every Friday, she receives a new shipment of books. Last Friday, she received **42** books in total — **15** were mystery novels, **10** were science fiction, and the remaining **17** were poetry collections.

That evening, she sold **23** books: **8** mysteries, **7** sci-fi, and **8** poetry books. Her friend Max, who visited the store at **6:30 PM**, noticed that one poetry book was missing from the shelf but wasn't recorded as sold.

By Saturday morning, Lena did an inventory and found only **18** books left on the shelf, even though she expected **19**. She checked the camera footage from **7:15 PM**, which revealed that a customer had accidentally placed a poetry book among the used books pile — mystery solved!
